AUDIT REPORT

Safety & WHS Audit

Workplace Health & Safety Compliance Assessment

IronPeak Fitness (fictional network) • Geelong, VIC

Audit conducted 29 June 2026 • Report issued 1 July 2026 • Ref: MA-2026-WH-0192

Client (fictional)	IronPeak Fitness (fictional network)
Location	Geelong, VIC (opened 2022)
Audit type	Safety & WHS Audit
Audit conducted	29 June 2026
Report issued	1 July 2026 (48-hour turnaround)
Lead auditor	R. Patel, WHS Lead Auditor — Maintain Audits
Report reference	MA-2026-WH-0192
Distribution	Franchisor head office; franchisee principal — Commercial in confidence

SAMPLE DOCUMENT — all client details and findings are fictional, prepared to demonstrate Maintain Audits' reporting format.

SECTION 1 | EXECUTIVE SUMMARY

IronPeak Geelong was assessed against the network WHS standard v3 and applicable obligations under the Work Health and Safety Act (Vic) 2011. The site scored 71% against a network target of 90%, earning a High rating. Six findings were raised: one Critical, two High, and three Medium.

The Critical finding was identified and partially resolved on the day: a frayed cable on a cable crossover machine that was in active use at audit commencement was isolated immediately. That machine must not return to service until a qualified technician has inspected and certified it. The remaining findings — lapsed equipment inspection tags, unrecorded injuries, outdated evacuation diagrams, unlabelled chemicals, and two coaches with expired first aid — are each individually manageable but together indicate that the site's WHS maintenance discipline has slipped since the post-opening period.

The franchisee was cooperative throughout and took the cable isolation seriously. Closing these findings will return the site to the safety standard its members and staff are entitled to.

Overall Result

Measure	Result
Overall compliance score	71% (target ≥ 90%)
Overall rating	High
Findings raised	6
Most urgent action due	Cable crossover machine — do not return to service (WH-01)

Findings by Risk Rating

Rating	Count
Critical	1
High	2
Medium	3

SECTION 2 | SCOPE & METHODOLOGY

A full WHS compliance audit against the IronPeak Network WHS Standard v3 and the Work Health and Safety Act (Vic) 2011, covering all hazard categories relevant to a 24-hour gym environment.

In Scope

- Equipment safety — condition, tagging, anchoring, and service history
- Injury and incident recording — register currency, near-miss reporting
- Emergency preparedness — evacuation procedures, diagrams, AED, first aid coverage
- Chemical management — storage, labelling, SDS availability
- Staff qualifications — first aid currency, emergency warden designation
- Physical environment — slip/trip hazards, lighting, signage

How the Audit Was Conducted

- Unannounced full-day site audit using the 88-point WHS checklist
- Equipment inspection including visual inspection of all resistance, cardio, and functional training equipment
- Review of inspection tags, service records, and manufacturer maintenance schedules
- Document review: injury register, evacuation plan, chemical register, staff qualifications
- Walk-through with franchisee and club manager

Risk Rating Scale

Rating	Meaning	Action required
Critical	Immediate threat to safety, legal compliance, or brand integrity.	Within 48 hours
High	Material non-compliance likely to cause customer, safety, or financial impact.	Within 7 days
Medium	Non-compliance with franchise standards; manageable if addressed promptly.	Within 30 days
Low	Minor deviation or housekeeping issue.	Within 90 days
Observation	Not a non-compliance; an improvement opportunity worth acting on.	At next review

SECTION 3 | FINDINGS SUMMARY

ID	Area	Finding	Rating
WH-01	Equipment safety	Frayed cable on cable crossover in active use — isolated on audit day	Critical
WH-02	Incident recording	Injury register missing 3 incidents known to have occurred in preceding 60 days	High
WH-03	Equipment safety	Resistance and cable equipment inspection tags lapsed since November 2025	High
WH-04	Emergency preparedness	Evacuation diagrams are superseded — show old layout before 2025 refurbishment	Medium
WH-05	Chemical management	Chemical bottles in cleaning cupboard unlabelled; no SDS on site	Medium
WH-06	Staff qualifications	2 of 6 coaches have expired first aid certificates	Medium

SECTION 4 | DETAILED FINDINGS

CRITICAL

WH-01 — Frayed cable on cable crossover in active use — isolated on audit day

Rating	Area	Standard / reference	Remediate by
Critical	Equipment safety	WHS Act (Vic) 2011 s.19; IronPeak WHS std 3.2	Do not return to service until certified

What we found: A high cable crossover station (station 3) had a visible fray in the cable approximately 40cm from the upper pulley on the right side. The machine was in use by a member at audit commencement. The auditor identified the hazard immediately; the franchisee removed the machine from service and taped off the area during the audit. A cable failure on this type of equipment at load can cause serious injury.

Evidence: Photos 001–006 (cable close-up, machine tagged out). The tagging-out has been confirmed.

Recommended action: Do not return to service until a qualified equipment technician has inspected the cable, replaced it if required, and issued a written safety clearance. Implement a monthly equipment visual inspection process so fraying is identified before it becomes a hazard. The existing inspection checklist form (Form WHS-03) can be used for this purpose.

Responsible: Franchisee / equipment service provider

HIGH

WH-02 — Injury register missing 3 incidents known to have occurred in preceding 60 days

Rating	Area	Standard / reference	Remediate by
High	Incident recording	WHS Act (Vic) 2011; IronPeak WHS std 6.1	Within 7 days

What we found: During the walk-through, the club manager described three member incidents in the preceding 60 days (two minor equipment-related strains, one slip near the change room). None appeared in the injury register. The franchisee confirmed the incidents occurred but acknowledged the register had not been updated.

Evidence: Interview with club manager; injury register reviewed — last entry dated 4 February 2026.

Recommended action: Record all three known incidents in the register retrospectively with the best available information. Establish a process requiring any incident to be recorded in the register before end of shift. Designate a named staff member as the register custodian.

Responsible: Franchisee / club manager

HIGH

WH-03 — Resistance and cable equipment inspection tags lapsed since November 2025

Rating	Area	Standard / reference	Remediate by
High	Equipment safety	IronPeak WHS std 3.4; manufacturer maintenance schedule	Within 7 days

What we found: Of 34 resistance and cable machines inspected, 28 had inspection tags dated November 2025 — eight months lapsed against a 6-month inspection cycle. The six-monthly inspection is a network standard requirement and, for cable equipment in particular, a critical safety control. The WH-01 cable fault is consistent with missed inspections.

Evidence: Inspection tag audit — all 34 machines photographed; photos 020–053.

Recommended action: Book the equipment service provider to complete a full fleet inspection within 7 days and tag accordingly. Establish a calendar reminder for the next inspection due date (6 months forward) and assign responsibility to the club manager.

Responsible: Franchisee / club manager

MEDIUM
WH-04 — Evacuation diagrams are superseded — show old layout before 2025 refurbishment

Rating	Area	Standard / reference	Remediate by
Medium	Emergency preparedness	WHS Act (Vic) 2011; IronPeak WHS std 7.1	Within 30 days

What we found: All posted evacuation diagrams still show the pre-refurbishment floor plan. The 2025 refurbishment moved the assembly point and changed the layout of the functional training zone. Members relying on the diagrams in an emergency would receive incorrect information.

Evidence: Photos 058–062 (posted diagrams vs current floor plan).

Recommended action: Engage the network's preferred safety supplier to produce updated diagrams reflecting the current layout, and have them posted in all required locations within 30 days. The club manager can obtain the current floor plan from the network facilities team.

Responsible: Franchisee / club manager

MEDIUM
WH-05 — Chemical bottles in cleaning cupboard unlabelled; no SDS on site

Rating	Area	Standard / reference	Remediate by
Medium	Chemical management	Model WHS Regulations 2011 r.341; IronPeak WHS std 5.1	Within 30 days

What we found: Seven of nine chemical bottles in the cleaning cupboard were unlabelled — contents not identifiable without reading the original packaging, which in several cases had been discarded. No Safety Data Sheets were accessible on site or posted in the chemical storage area.

Evidence: Photos 071–075; chemical cupboard inventory.

Recommended action: Label all containers immediately. Obtain SDS for each product in use (available from the supplier or the network's chemical register on the portal) and post in the storage area. Implement a rule that chemicals are stored only in their original labelled containers.

Responsible: Club manager

MEDIUM
WH-06 — 2 of 6 coaches have expired first aid certificates

Rating	Area	Standard / reference	Remediate by
Medium	Staff qualifications	IronPeak WHS std 8.1; fitness industry standard	Within 30 days

What we found: Two of six coaches on the current roster have first aid certificates that expired in March 2026. The network standard requires all coaches to hold current first aid. The franchisee was aware but had not yet arranged renewals.

Evidence: Certificate records reviewed on site; two certificates expired 31 March 2026.

Recommended action: Enrol both coaches in the next available first aid renewal course. Until renewed, ensure neither coach is the sole qualified first aider on a shift. The network has a preferred training provider listed on the compliance portal with discounted rates.

Responsible: Franchisee

SECTION 5 | WHAT'S WORKING WELL

An audit should recognise strength as clearly as it flags risk. The following practices met or exceeded the network standard:

- The franchisee's immediate response to WH-01 — tagging out the machine mid-audit without hesitation — demonstrates appropriate safety culture at the ownership level
- AED is present, current, and registered; staff are trained in its use
- Cardio equipment (treadmills, bikes, rowers) is in excellent condition with current inspection tags
- The gym floor and change rooms were clean and free of slip/trip hazards at audit time

SECTION 6 | REMEDIATION ROADMAP

Actions are sequenced by risk. Maintain Audits can verify closure of each item through a follow-up desktop review or re-inspection.

ID	Action	Owner	Due
WH-01	Technician inspection and certification before return to service	Franchisee / service provider	Before return to use
WH-02	Record three known incidents retrospectively; establish end-of-shift process	Franchisee / club manager	Within 7 days
WH-03	Full fleet inspection and tagging; forward calendar reminder	Franchisee / club manager	Within 7 days
WH-04	Updated evacuation diagrams posted in all locations	Franchisee / club manager	Within 30 days
WH-05	Label all containers; post SDS; enforce original-container rule	Club manager	Within 30 days
WH-06	Renrol two coaches in first aid renewal	Franchisee	Within 30 days

SECTION 7 | NEXT STEPS & ONGOING MONITORING

- Evidence of WH-01 technician sign-off and WH-02/03 completion within 7 days — desktop review at no charge
- Recommend a 6-monthly WHS self-assessment using the network checklist, with results submitted to the support office
- Full re-audit recommended at the 12-month mark to confirm sustained compliance
