AUDIT REPORT

Customer Experience Audit

Mystery Shop & Service Quality Assessment

Glow Wellness Studio (fictional network) • Rundle Place, Adelaide, SA

Audit conducted 22 June–3 July 2026 • Report issued 6 July 2026 • Ref: MA-2026-CX-0119

Client (fictional)	Glow Wellness Studio (fictional network)
Location	Rundle Place, Adelaide, SA
Audit type	Customer Experience Audit
Audit conducted	22 June – 3 July 2026 (3 visits + benchmarking)
Report issued	6 July 2026 (48-hour turnaround)
Lead auditor	T. Nguyen, CX Program Lead — Maintain Audits
Report reference	MA-2026-CX-0119
Distribution	Franchisor head office; franchisee principal — Commercial in confidence

SAMPLE DOCUMENT — all client details and findings are fictional, prepared to demonstrate Maintain Audits' reporting format.

SECTION 1 | EXECUTIVE SUMMARY

Three mystery evaluations (two in-studio treatments, one phone/online booking journey) and an NPS benchmark were conducted at Glow Adelaide over a two-week window. The studio delivers genuinely excellent in-treatment experiences — both therapists scored in the network's top decile for treatment quality — but is losing customers before and after the treatment itself.

The booking journey is the standout problem: our evaluator's first call went to voicemail and was never returned (a lost booking in a real scenario), the online booking system offered no availability for 9 days while walk-in slots existed the same afternoon, and no shopper received any post-visit follow-up or rebooking prompt.

Overall CX score: 72% against the network standard of 85%. The studio's NPS of +31 sits below the network median of +44 — a gap fully explained by the pre- and post-treatment journey, not the service itself. This is an encouraging finding: the hard part (the treatment) is excellent; the fixable part (the journey around it) is process.

Overall Result

Measure	Result
Overall compliance score	72% composite CX score (network standard $\geq$ 85%); NPS +31 vs network median +44
Overall rating	Medium
Findings raised	6
Most urgent action due	Voicemail/missed-call handling (CX-01) — within 7 days

Findings by Risk Rating

Rating	Count
High	3
Medium	2
Observation	1

SECTION 2 | SCOPE & METHODOLOGY

A customer experience assessment combining structured mystery evaluations, booking-journey testing, and NPS benchmarking against the Glow network CX standard v2.

In Scope

- Booking journey — phone, online, and walk-in enquiry handling
- Arrival and welcome experience, consultation quality, treatment delivery
- Retail recommendation and checkout experience
- Post-visit follow-up, rebooking prompts, and complaint handling responsiveness
- NPS benchmarking against network and category

How the Audit Was Conducted

- Two full mystery treatment evaluations by trained evaluators (different services, different weekdays)
- One complete booking-journey test: phone, online system, and email enquiry
- Post-visit follow-up monitored for 10 days after each visit
- NPS pulse survey to the studio's opted-in client list (n=214, 38% response) benchmarked against network data
- Scoring against the network's 60-point CX standard

Risk Rating Scale

Rating	Meaning	Action required
Critical	Immediate threat to safety, legal compliance, or brand integrity.	Within 48 hours
High	Material non-compliance likely to cause customer, safety, or financial impact.	Within 7 days
Medium	Non-compliance with franchise standards; manageable if addressed promptly.	Within 30 days
Low	Minor deviation or housekeeping issue.	Within 90 days
Observation	Not a non-compliance; an improvement opportunity worth acting on.	At next review

SECTION 3 | FINDINGS SUMMARY

ID	Area	Finding	Rating
CX-01	Booking journey	Missed call never returned — a lost booking	High
CX-02	Online booking	Online system hid same-day availability that existed in-studio	High
CX-03	Post-visit journey	No follow-up or rebooking prompt after either visit	High
CX-04	Consultation	Consultation skipped for a first-visit client	Medium
CX-05	Retail & checkout	No aftercare or retail recommendation at either checkout	Medium
CX-06	Environment	Relaxation-area noise intrusion from adjacent retail tenancy	Observation

SECTION 4 | DETAILED FINDINGS
HIGH
CX-01 — Missed call never returned — a lost booking

Rating	Area	Standard / reference	Remediate by
High	Booking journey	CX standard s.1.2	Within 7 days

What we found: Our evaluator's first booking call (Tuesday 11:04am, during staffed hours) rang out to voicemail. A message requesting a callback was left; no return call was received in the 10-day monitoring window. In a real scenario this is a silently lost client — and the studio has no way of knowing how often it happens.

Evidence: Call log and recording reference MA-CX-0119-C1; voicemail transcript.

Recommended action: Introduce a missed-call protocol: voicemail checked and returned at set times daily, with the front-desk tablet showing missed-call alerts. The network's phone system supports missed-call SMS auto-reply ('Sorry we missed you — book here') which is unused at this studio.

Responsible: Studio manager

HIGH
CX-02 — Online system hid same-day availability that existed in-studio

Rating	Area	Standard / reference	Remediate by
High	Online booking	CX standard s.1.4	Within 7 days

What we found: The online booking system showed no availability for 9 days, yet a walk-in enquiry the same afternoon was offered two slots that day. Staff confirmed therapist columns are routinely blocked out in the booking system 'to keep flexibility'. The studio is invisibly full online while actually having capacity.

Evidence: Booking system screenshots; walk-in evaluation notes.

Recommended action: Unblock therapist columns and manage flexibility through the system's buffer rules instead. Review online-vs-actual utilisation weekly for a month to confirm the fix.

Responsible: Studio manager

HIGH
CX-03 — No follow-up or rebooking prompt after either visit

Rating	Area	Standard / reference	Remediate by
High	Post-visit journey	CX standard s.4.1	Within 7 days

What we found: Neither evaluator received any post-visit contact — no thank-you, no aftercare message, no rebooking prompt — in 10 days of monitoring. Neither was invited to rebook at checkout. The network's automated journey (aftercare message day 1, rebooking prompt day 7) is switched off at this studio.

Evidence: Monitoring logs both visits; checkout observation notes; journey configuration check with network support.

Recommended action: Re-enable the automated post-visit journey and train the front desk on the checkout rebooking ask. Network data attributes roughly 20% of rebookings to these two touchpoints.

Responsible: Studio manager / network support

MEDIUM
CX-04 — Consultation skipped for a first-visit client

Rating	Area	Standard / reference	Remediate by
Medium	Consultation	CX standard s.2.3; treatment protocol	Within 30 days

What we found: Evaluator 2 (presenting as a first-time client) was taken straight to treatment with no consultation form, contraindication check, or preference discussion. Beyond the experience gap, skipping contraindication screening is a clinical-governance issue.

Evidence: Evaluation report 2, items 14–19.

Recommended action: Reinstate the mandatory first-visit consultation. The digital intake form (sent at booking) reduces the in-studio time cost to under three minutes.

Responsible: Studio manager / senior therapist

MEDIUM CX-05 — No aftercare or retail recommendation at either checkout

Rating	Area	Standard / reference	Remediate by
Medium	Retail & checkout	CX standard s.3.2	Within 30 days

What we found: Neither evaluator received an aftercare recommendation despite both treatments having a natural product follow-on. The studio's retail attach rate (11%) is under half the network median (26%) — consistent with what we observed.

Evidence: Checkout observations both visits; network retail benchmarking data.

Recommended action: Introduce the network's 'prescription pad' aftercare recommendation at checkout — positioned as care advice, not selling, which also matches how the studio's team naturally communicates.

Responsible: Studio manager

OBSERVATION CX-06 — Relaxation-area noise intrusion from adjacent retail tenancy

Rating	Area	Standard / reference	Remediate by
Observation	Environment	CX standard s.2.1	At next review

What we found: Both evaluators noted clearly audible music and voice noise from the adjacent tenancy in the relaxation area during treatments — outside the studio's direct control but material to the premium experience.

Evidence: Evaluation reports 1 and 2; decibel spot readings.

Recommended action: Raise with centre management (lease quiet-enjoyment provisions may assist); interim mitigation via ambient sound masking in the relaxation area.

Responsible: Franchisee

SECTION 5 | WHAT'S WORKING WELL

An audit should recognise strength as clearly as it flags risk. The following practices met or exceeded the network standard:

- Treatment quality is outstanding — both evaluations scored 95%+ in-treatment, top decile for the network

- Studio presentation, hygiene, and treatment-room standards were immaculate on both visits
- The welcome on arrival (when clients get there) is warm, personal, and unhurried
- NPS verbatims are strikingly loyal to individual therapists — a retention asset most studios would envy

SECTION 6 | REMEDIATION ROADMAP

Actions are sequenced by risk. Maintain Audits can verify closure of each item through a follow-up desktop review or re-inspection.

ID	Action	Owner	Due
CX-01	Implement missed-call protocol and enable SMS auto-reply	Studio manager	Within 7 days
CX-02	Unblock online availability; manage buffers through system rules	Studio manager	Within 7 days
CX-03	Re-enable automated post-visit journey; checkout rebooking training	Studio manager / network support	Within 7 days
CX-04	Reinstate first-visit consultation with digital intake	Studio manager / senior therapist	Within 30 days
CX-05	Introduce aftercare recommendation practice at checkout	Studio manager	Within 30 days
CX-06	Centre management engagement; interim sound masking	Franchisee	At next review

SECTION 7 | NEXT STEPS & ONGOING MONITORING

- CX-01 to CX-03 are configuration and process changes verifiable by desktop — evidence within 14 days
- Recommend a repeat mystery cycle in 90 days to re-benchmark the composite score and NPS
- The gap analysis suggests a realistic path from +31 to network-median NPS within two quarters
